Experiment-15

Analyse various Types of servers using Webalizer Tool

Aim:

To analyze web server usage and performance using the webalizer log analysis tool.

Algorithm:

1. Install webalizer on Linux.
2. Obtain the web server access log file
3. configure the log file and output directory
4. Run webalizer to analyze the logs
5. Generate the HTML report
6. View the report in a browser and analyze server statistics.

Procedure:

Step 1: Install webalizer

```
sudo apt update
sudo apt install webalizer
```

Step 2: configure webalizer

```
sudo nano /etc/webalizer/webalizer.conf
```

Step 3: Run webalizer

```
sudo webalizer -c /etc/webalizer/
    webalizer.conf
```

Step 4: View the report

open the browser and enter

```
http://localhost/webalizer/
```

output:

Webalizer Statistics

Month	Visits	Pages	Hits
Jan	1250	3420	7345
Feb	1480	3915	8120
Mar	1635	4250	8950

Top urls:

/ index.html
/ about.html
/ products.html

Response code:

200 OK
301 Redirect
404 Not found
500 Server Error

output:

Result:

Thus, Webalizer was used to analyze web server logs and generate reports containing visitor statistics, page requests, bandwidth usage, popular urls, response code
